Career Profile

I am currently an undergraduate student in the field of Informatics based in Greece, Corfu. Some of my positive personality traits is my mood for contribution and my organization skills. The Computer Science fields that pick my interest are anything that envolves psychology, philosophy and design.

Education

BSc in Informatics

2019 - Present

Ionian University

In this time period I am on my 3rd year in the University with specialty in Humanistic Informatics. The bachelor degree is campus based with a good reputation among other Hellenic Universities.

Experiences

As a university student without time or a certification is pretty hard to land a job. My main goal is to improve my skills and build the foundation for the future.

Projects

In my spare time I like to experiment with website design and mainly how to make a website interactive and user-friendly. Below are two projects I worked on in the past year.

Computer Science Quiz Website - This website was created as an academic project for the subject Multimedia with the help of my friend and colleague Thomas Paschalis. The code and all the required files are uploaded in a repository on my github account.

Literature Club Website - A website I created on blogspot during the 2nd quarantine season for the lovers of literature. The purpose of the website was to give young and aspiring writers a chance to publish their stories for free.
